

For this challenge, you need to create an employee dashboard. This will be all on one page, divided into two sections.

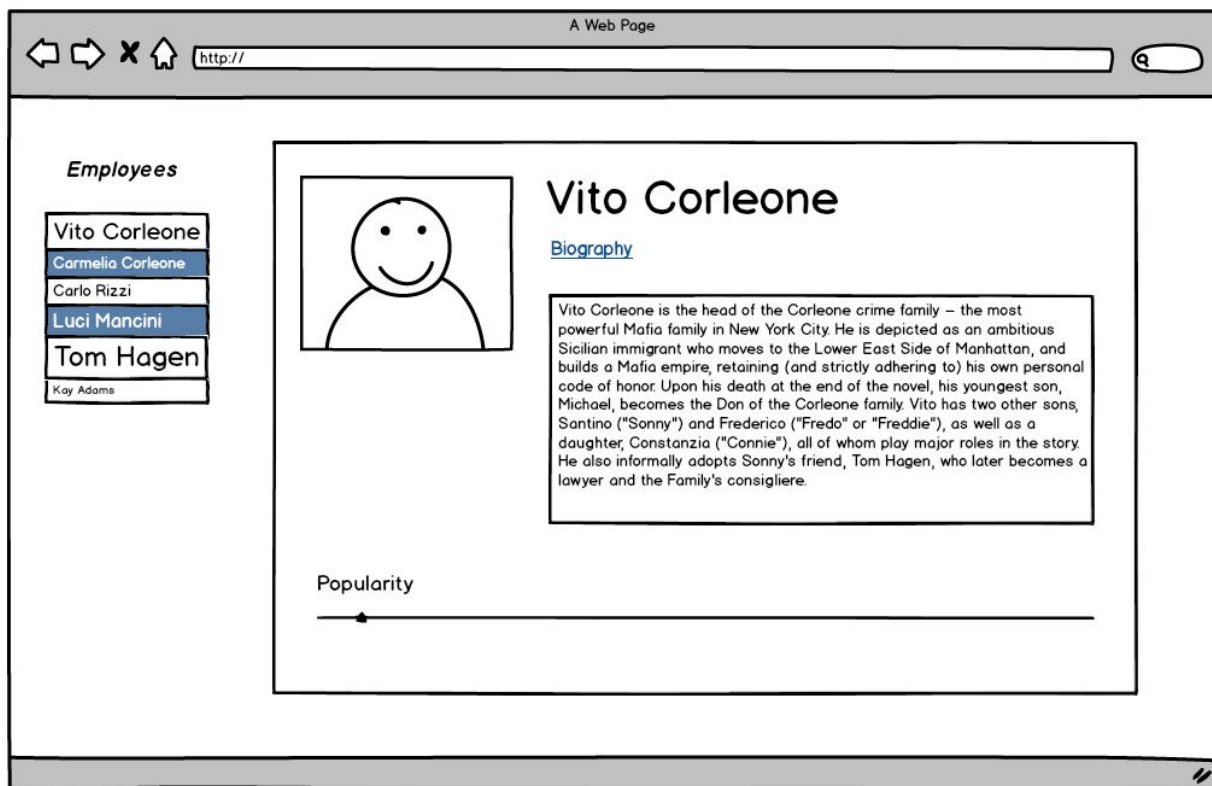

On the left-hand side will be a list of all the employees, the font size should reflect their popularity values in the data. Clicking on a person in the list will bring up a view of their details, and highlight those in the list they have worked with.

In the details view, the popularity slider will dynamically adjust the font size of their names in the list.

The data is available for you to consume at the publicly hosted address [here](https://googledrive.com/host/0B2puvkeNttAESzhFV2pTd3lwWDA/data.json) / below, and refer to the mockup provided.

Object-oriented JavaScript is more important than look and feel, though a demonstration of well-structured markup and CSS is desirable. Also, feel free to use any JavaScript framework and/or tools of your choice.

The challenge should take around 2 hours. Please could you return the challenge by email as close to the two hour mark as possible.
